Greenfield**

**Multiple  
ULD Loading**

**Sequenced and  
Non-sequenced**

**Ergonomic**

**Up to 200 Bags/hr**

**Minimal Building  
Modifications**

# Revolutionize Baggage Loading

Airports worldwide face challenges in finding personnel for loading baggage in Unit Load Devices (ULDs) due to labor shortages and the physically demanding nature of the job. The Eltonomous addresses this by significantly increasing productivity per worker and minimizing physical strain.

Designed for seamless integration, the Eltonomous can be implemented in both brownfield and greenfield environments with minimal building modifications. No sequencing is needed for deployment, allowing for unlimited segregations as desired. The Eltonomous is compatible with all existing baggage handling systems, ensuring smooth and efficient operations.

Keep your workforce happy and in good health

## Curious how Eltonomous can improve baggage loading at your airport?

Get in touch with us. We would love to share our expertise and discuss possible solutions.
